

## Kronprinz: Reliability and durability in every wheel

- **Lightweight without compromise:**

Our truck wheels are 8 kg lighter than similar wheels available on the Russian market.

This is achieved through the use of high-strength steel grades, guaranteeing exceptional strength and durability.

Reducing wheel weight while maintaining the same load index results in fuel savings and increased axle payload.

- **Load-rated strength:**

Our wheels withstand increased loads thanks to the use of high-quality steel with improved strength characteristics. Innovative design solutions ensure additional reliability and durability.

- **High-quality corrosion protection:**

Our long-standing collaboration with Volvo has allowed us to perfect our wheel coating technology. Today, our wheels meet the most stringent requirements of global brands. Adherence to high standards at every stage, from material selection to coating application, guarantees excellent corrosion protection and an attractive appearance.

- **Quality confirmed by standards:**

Kronprinz wheels are manufactured in Russian factories and undergo strict quality control in Russian laboratories.

This gives you confidence that they meet Russian standards. Our wheels are developed and tested by leading design laboratories, confirming their compliance with international quality standards.
